What's new in cyber security?

**Ransomware
spreading**

46% increase in
new ransomware
variants

**Malware
proliferating**

8,500% increase in
coinminer
detections
(cryptojacking)

**Mobile
attacks rising**

54% increase in
mobile malware
variants

**Targeted
attacks growing**

10% increase in
techniques like
Spearfishing

Today's top risks

Are your endpoints protected against these threats?

#1: Ransomware

5.5B
WannaCry attacks blocked

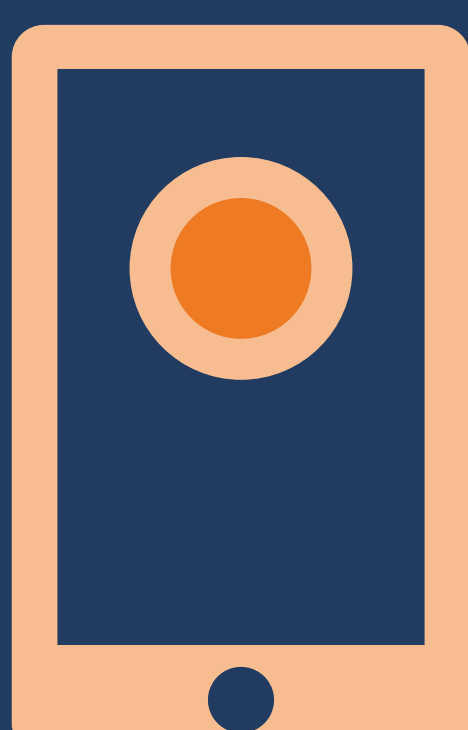

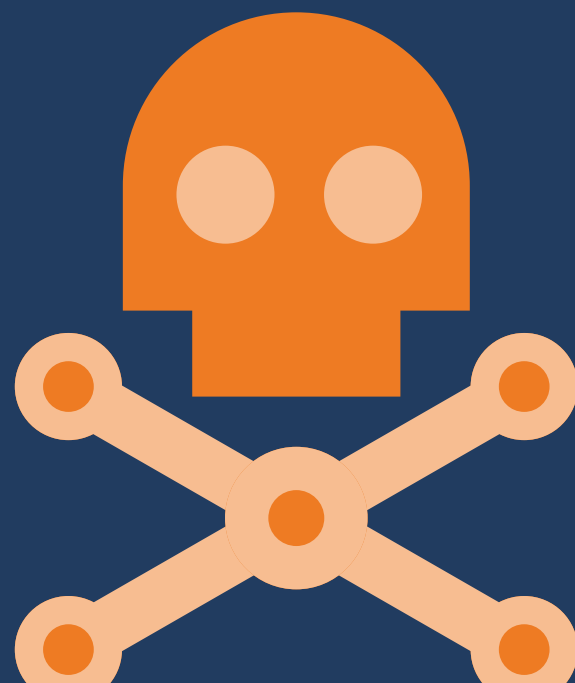

“Many cyber criminals may have shifted their focus to coin mining as an alternative to cash in while crypto currency values are high.”

#2: Malware

92%
increase in new
downloader variants

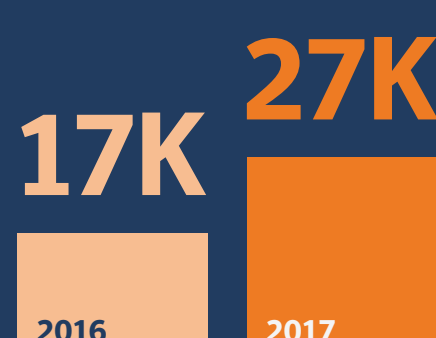

34,000%
in coinmining activity

200%
increase in malware injections
into supply chains, e.g. hijacking
software updates

#3: Mobile attacks

Number of new variants

24K
Average number of malicious
mobile apps blocked each day

#4: Targeted attacks

71%
of organised cyber criminal
groups employ spear-phishing

10%
increase in organisations affected
by targeted attacks
